2021 Programs and Incentives. More Ways to Finance, Earn and Save.

Expanded Demand Response, Automation and TOU Response Options.

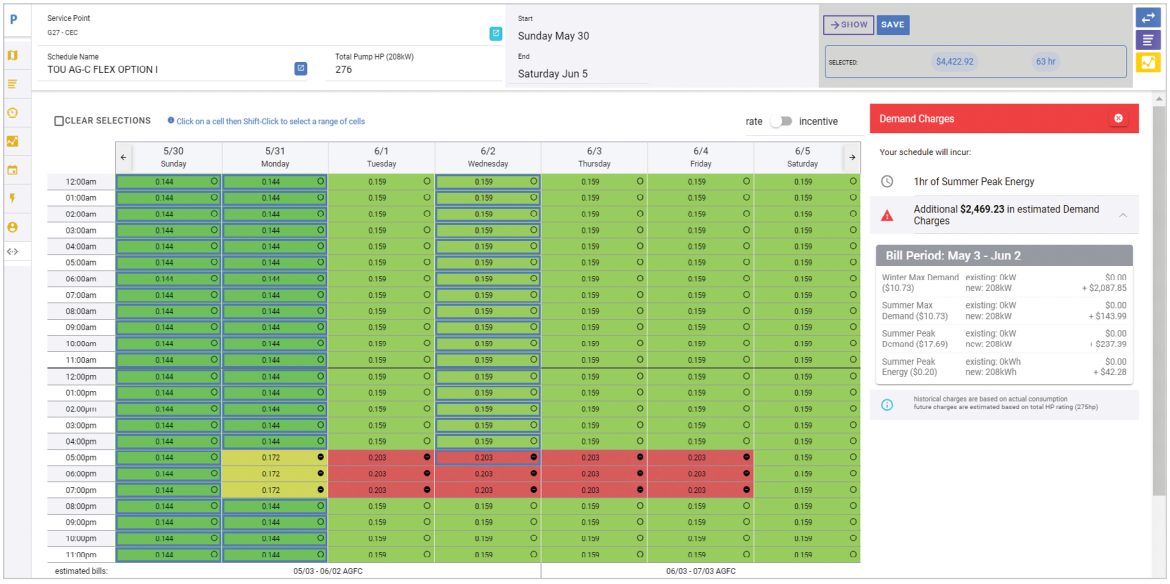
AutoDR. $200/kW for projects that automate pumping and irrigation systems.

Demand Response. Increased incentives and improved terms for existing programs and new, voluntary programs enable greater flexibility to include more customers and pumps.

Time of Use (TOU). Technology and support to manage scheduling under the new rate options and maximize savings.

Integrations. Open API to receive AutoDR signals--and incentives--via the cloud for third-party automation systems.

The Polaris team works with Ag customers like Terranova Ranch and Campos Brothers to pilot innovative pump automation, irrigation and energy programs that optimize operations while delivering smarter savings.



The intuitive myPOLARIS mobile and web app simplify pump automation and irrigation control. They make it easy to manage pumps—applying the right amount of water at the right time while minimizing energy costs. The result? Energy savings, superior irrigation uniformity, and greatly reduced labor costs.

Easily automate, customize and control pump operation.

Flexible, end-to-end system for lowest cost of operations.

The POLARIS Pump Automation System gives you control and visibility to easily deliver the right amount of water at the right time for the lowest cost of operations...from one to hundreds of pumps. Use the *myPOLARIS* app on any smartphone, tablet or computer for wireless 2-way communications with remote pump controllers and field sensors.

- Remote control and scheduled pump operations with energy cost optimization
- Flow, well, canal and reservoir monitoring for operations management, pump health and efficiency analysis and SGMA reporting compliance
- Proactive monitoring by the Polaris Network Operations Center to support your team in identifying and fixing problems quickly
- Optional AutoDR and Demand Response built in to offset system costs and provide ongoing revenue streams
